Construction Health and Safety Services

Basic, Advanced & Specialty Training Courses
Benefits of Safety Training

Effective safety practices are key to preventing injuries, avoiding work interruption, reducing property damage, controlling costs and ensuring regulatory compliance. Safety training is key to implementing effective programs by ensuring all stakeholders possess the necessary knowledge and skills to follow their organization’s safety program.

The best training ensures participants understand the applicable safety standards, are motivated to follow them and are current in best practices. Effective training helps create safety champions rather than program followers.

Medcor provides interactive, up-to-date worksite safety training that meets regulatory requirements and can be customized to fit each client’s specific needs and program. These practical courses combine hands-on experience with current content.

Qualified Instructors

Medcor’s instructors are dedicated professionals. They combine effective teaching skills with real world experience in the subjects they teach. They hold relevant certifications and have a passion for safety. They are patient, respectful and committed to ensuring each student in each class is successful. They adhere to high standards for themselves and their students. Instructors always gather student feedback so that courses can be adapted and improved.

Medcor’s instructors hold certifications from the Occupational Safety & Health Administration (OSHA), Federal Emergency Management Agency (FEMA), American Heart Association (AHA), American Red Cross (ARC), National Incident Management System (NIMS), Office of the State Fire Marshal (OSFM), Society of Professional Rope Access Technicians (SPRAT), International Association of Professional Drivers (IAPD), and other national and state agencies and accrediting bodies. Medcor uses OSHA-authorized instructors.

Worksite Training

Clients benefit from Medcor conducting its training at the client’s worksite, which reduces travel costs for students and minimizes work interruption. Worksite training also facilitates using site-specific equipment and settings to make the topics relevant. When off-site facilities are required, Medcor can arrange them.

Clients also benefit by scheduling training when it is convenient for the client and the students, including training during off-shifts, if desired.

Classes are available anywhere in the United States and Canada.

Complete Course Content & Materials

Medcor provides all necessary course content, workbooks, checklists and training materials, including videos and other materials. When large and expensive equipment is required for training, Medcor works directly with clients to determine the most cost effective way of providing the necessary resources.

Certifications

Coursework includes relevant documentation, exams and skill testing, and applicable certifications.

Safety Staffing Services

On-site safety professionals are available for staff augmentation at projects nationwide, up to 24/7 coverage. Medcor delivers its on-site safety staffing services through our subsidiary, Brown Services, LLC. Safety services also include compliance audits, inspections, investigations and program development: www.brownsafetyservices.com.

Medcor’s staffing services are available in Canada through our subsidiary Medcor Canada: www.medcorcanada.com.
